Trane to Discuss Fast-Payback, Low-Risk Energy Conservation Measures at Facility Decisions 2009 Conference *Attendees to Learn Simple Steps to Conserve Energy*

Las Vegas, Nevada (September 7, 2009) — Businesses around the world continue to confront an environment of unprecedented challenges in energy and operations. Any operating efficiencies that can contribute to the bottom line or further organizational goals are desired in this environment. Efforts that can deliver the greatest impact and largest savings for the organization should be given the highest priority.

Energy use in buildings is significant and growing. Because energy use can account for up to 40 percent of the total operating expenses of a building, energy conservation measures for buildings offer a good place to start when seeking ways to reduce operating cost and make a significant impact on the bottom line quickly.

At the Facility Decisions 2009 Conference, **Dane Taival, vice president of contracting solutions for Trane**, will present a detailed blueprint for energy conservation plans within an organization. In addition to lower utility and operating costs, energy conservation delivers benefits including reduced carbon footprint, increased market value for buildings, increased productivity of occupants and reduced absenteeism in the workplace.

Conference attendees will learn how to establish energy goals; determine energy-saving measures that deliver the best results; evaluate financial options; develop an energy conservation plan from start to finish; apply deep energy conservation measures in their buildings in order to drive business outcomes; finance energy-efficiency improvements in the current economic environment; and measure success.

Details of his presentation are:

When: September 23, 2009 at 2:10 p.m. (Conference is September 22-23)
Where: Las Vegas Convention Center, Las Vegas, NV
Conference Website: <http://www.facilitydecisions.com/>

Facility Decisions is an annual trade show and educational conference for facility professionals responsible for the management, operations, maintenance, renovation and construction of non-residential buildings. Educational sessions will teach attendees which green initiatives will yield the greatest return, how to improve worker productivity and tenant satisfaction, how to reduce energy costs and how to shift a facility into the assets column of the corporate balance sheet.
